WHAT FARMERS ARE SAYING

”

“Went from a controlled spill, where it was a guess setting the pump and we were running back to check marks on the tank, to now having great peace of mind and accuracy”

-Alex Noll

“The InjectorSentry is a great reliable product that will provide growers with ease of mind when it comes to fertigation.”

-Tim Cahoy

Riverview Nebraska

“The InjectorSentry Lite was easy to use, reliable, and gave a sense of security when applying expensive chemicals through our pivot.”

-Nathan Koehl

CR Koehl & Sons

“Really like the way it worked and was good to know right away where we were at on flow rate for fertilizer. Cost seems really good for what it does for us. The other way is just a guess until you run it for a while. I also like the fact it shuts the pivot down if you want it to when fertilizer runs out.”

-Aaron Rottinghaus

MINIMIZE SKIPS AND FIELD VISITS

Without the InjectorSentry, any issues that arise during a fertilizer application leave you uncertain about when and where the problem occurred. This often results in the need to reapply fertilizer to the affected area or bypass it entirely. With the InjectorSentry, however, the irrigation system will be automatically stopped as soon as the application deviates from its intended target, optimizing both time and resources. By eliminating the uncertainty in setting your pump, the InjectorSentry significantly reduces the need for frequent field visits to monitor the amount of product being injected.

COMPATABLE WITH YOUR EXISTING IRRIGATION MONITORING SERVICE

If you are subscribed to an irrigation monitoring service and are notified when your irrigator shuts down, you will know when the InjectorSentry has shut your irrigator down due to misapplication.

ACURATELY SET YOUR PUMP

InjectorSentry gives real time feedback of product flow rate assuring you know the amount of product that is actually being injected.

VIRTUAL TANK MONITOR

When filling your tank, enter the volume in the InjectorSentry. Tank volume is tracked in real time as product is used.

KEEPS WATCH FOR YOU

Once you have the flow rate where you want, arming the InjectorSentry will allow it to shut your irrigation system down if application rate goes off target.

EASILY MOVE FROM SITE TO SITE

The InjectorSentry was designed to be simple and easy to move if you share injection pumps between sites.
